**WHAT WE DO**

Our refined product pipeline system provides transportation, storage and distribution services in 15 states, including our ammonia pipeline and terminals system delivers ammonia from production facilities in Texas and Oklahoma to various points in the Midwest for use as an agricultural fertilizer.

Our crude oil pipeline system provides transportation, storage and distribution in three states.

Our marine terminals located in four states store and distribute petroleum products such as gasoline, diesel, crude and jet fuel.

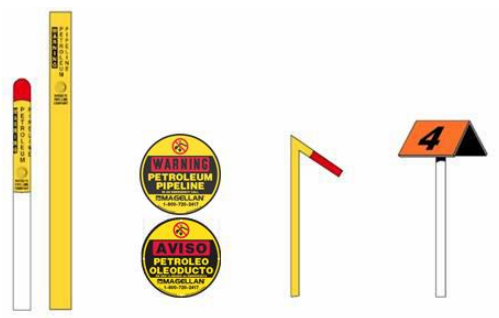

**COMMITMENT TO SAFETY, HEALTH, & ENVIRONMENT**

Magellan is committed to safe operations of our assets by maintaining the highest standards in safety. As part of our SIP Community Relations Program, Magellan strives to enhance public safety and environmental protection through increased public awareness and knowledge. By sharing information with property owners, businesses, excavators, emergency responders, public officials and other interested parties, we aim to raise the awareness of our pipeline facilities and help the public better understand the role they can play in contributing to pipeline safety.

**IDENTIFYING MAGELLAN'S PIPELINE**

Pipelines are marked by above-ground signs to indicate the approximate location, product carried and the name and contact information of the company that operates the pipeline. Pipelines are located in areas called a right-of-way (ROW) and these ROW's or areas are often recognizable as corridors that are clear of trees, buildings or other structures except for the pipeline markers.

Painted Metal or Plastic Posts    Signs located near roads, railroads, and along pipeline right-of-ways    Pipeline Casing vent    Marker for pipeline patrol plane
