

RUBY PIPELINE

The Ruby Pipeline is a 680-mile, 42-in. diameter natural gas pipeline. The pipeline originates in Opal, WY where numerous pipelines interconnect, and runs through Wyoming, Utah, and Nevada before terminating in Malin, Oregon. The Ruby pipeline became operational in 2011 and taps major supply basins in the Rockies region that serve energy markets in the Western US. Ruby has a capacity of 1.5 billion cubic feet per day (42×106 m3/d) of natural gas and has a MAOP of 1,440.

COMMITMENT TO SAFETY, HEALTH AND ENVIRONMENT

Tallgrass takes seriously its responsibility to ensure the health and safety of our employees, the general public and the environment. We comply with all federal, state, and local laws and regulations, and we meet or exceed industry standards and best practices.

Highly trained and experienced personnel monitor our pipelines 24 hours a day, 7 days a week using sophisticated Supervisory Control and Data Acquisition (SCADA) systems, so we have real-time information regarding the safety and integrity of our pipeline. We patrol our pipelines by foot, vehicle and aircraft to ensure safety and identify potential concerns such as encroachments. We have emergency shutdown systems that can isolate anomalies anywhere in our system quickly and safely. As part of our ongoing education efforts, we regularly work with first responders using tools such as tabletop exercises and hands on mock drills to ensure they are familiar with our assets and know what to do in the unlikely event of an emergency. In addition, Tallgrass is an active member of Common Ground Alliance (CGA), working together to educate Stakeholders on pipeline safety and to promote safe excavation.

For more information about our commitment to safety and our public awareness, damage prevention and emergency preparedness activities and resources, please visit www.tallgrass.com or contact Tallgrass directly.
