WBI Energy Transmission transports natural gas. Our steel pipelines vary in size from 2 inches to 24 inches in diameter. Our computerized gas control center monitors the system 24 hours a day and can be reached at 1-888-859-7291.

COMMITMENT TO SAFETY, HEALTH & ENVIRONMENT

WBI Energy is committed to being a safe and responsible community member. We consider safety in everything we do; from the quality of the materials we purchase to inspections and maintenance after construction.

Pipeline safety is a responsibility that's shared among many people including pipeline company personnel, federal and state agencies, public safety officials and neighbors who live and work near pipelines. If you suspect something unusual, please contact our 24-hour number so we can dispatch company personnel to inspect our pipeline.

Pipeline emergency action will begin the moment we are notified of the situation. Personnel and equipment will be dispatched to identify the issue, control the flow of gas and make necessary repairs. We will coordinate our actions with fire, police, and other public officials.
