**ABOUT HARVEST MIDSTREAM**

Harvest Midstream Company delivers critical energy resources to fuel the lives of American families and businesses. We are a business truly grounded by our core values and are dedicated to always doing the right thing- for our customers, our people and the communities where we live and work.

Operating safely and responsibly is our top priority. Our robust pipeline safety programs are designed to proactively identify and address potential risks to ensure the safety of our employees and the communities where we operate. We partner closely with local, state and federal organizations to enhance public safety, improve preparedness and protect the environment.

**WHAT DOES HARVEST MIDSTREAM DO IF A LEAK OCCURS?**

Harvest Midstream is engaged in constant activity to maintain safe pipeline operations. In the event of a pipeline release the Harvest Midstream’s Emergency Response Team will take the following steps:

1. Assess the situation.
2. Respond to protect people, property, and the environment.
3. Call for assistance of trained personnel.
4. Work together.

**MAINTAINING SAFETY AND INTEGRITY OF PIPELINES**

Harvest Midstream Company invests significant time and capital maintaining the quality and integrity of their pipeline systems. Most pipelines are monitored 24 hours a day via manned control centers. Harvest Midstream Company also utilizes aerial surveillance and/or on-ground observers to identify potential dangers. Control center personnel continually monitor the pipeline system and assess changes in pressure and flow. They notify field personnel if there is a possibility of an Issue.

Gas transmission and hazardous liquid pipeline operators have developed supplemental hazard and assessment programs known as Integrity Management Programs (IMPs). Specific information about Harvest Midstream Company’s program may be found by contacting us directly.

| PRODUCT        | LEAK TYPE | VAPORS                                                                                                                                                                                                                                                                                        |
|----------------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CRUDE OIL      | Liquid    | Initially heavier than air and spread along ground and collect in low or confined areas. Vapors may travel to source of ignition and flash back. Explosion hazards indoors, outdoors or in sewers.                                                                                            |
| HEALTH HAZARDS |           | Inhalation or contact with material may irritate or burn skin and eyes. Fire may produce irritating, corrosive and/or toxic gases. Vapors may cause dizziness or suffocation. Runoff from fire control or dilution water may cause pollution.                                                 |
| NATURAL GAS    | Gas       | Lighter than air and will generally rise and dissipate. May gather in a confined space and travel to a source of ignition.                                                                                                                                                                    |
| HEALTH HAZARDS |           | Will be easily ignited by heat, sparks or flames and will form explosive mixtures with air. Vapors may cause dizziness or asphyxiation without warning and may be toxic if inhaled at high concentrations. Contact with gas or liquefied gas may cause burns, severe injury and/or frostbite. |
