- San Juan

Northwest Pipeline GP (Northwest), one of three interstate natural gas pipelines operated by Williams, is approximately 3,900-miles of natural gas pipeline extending from the San Juan Basin in northwestern New Mexico and southwestern Colorado through the states of Colorado, Utah, Wyoming, Idaho, Oregon and Washington to a point on the Canadian border near Sumas, Washington. Northwest's system provides access to British Columbia, Alberta, Rocky Mountain, and San Juan Basin gas supplies.

COMMITMENT TO SAFETY, HEALTH AND ENVIRONMENT

Williams is committed to maintaining the highest standards of safety. We want to make certain our operations remain as safe as possible to protect the public, our employees, and the pipelines' operational integrity. In case of an emergency, Williams will immediately dispatch personnel to the site to help handle the emergency and to provide information to emergency responders. We will also take the necessary operating actions - starting and stopping equipment, closing and opening valves, and other steps - to minimize the impact of the emergency.

Emergency Responders – below are a few suggestions for keeping the public safe in the event of a pipeline emergency:

- Secure the area around the leak to a safe distance. This could include the evacuation of people from homes, businesses, schools, nursing homes, and other locations. Use barricades to limit access.
- If the pipeline leak is not burning, take steps to prevent ignition. Prohibit smoking, reroute traffic, and shut off the electricity and residential gas supply.
- Contact the pipeline company as quickly as possible. Pipeline marker signs show the pipeline company's name, emergency telephone number, and pipeline contents.
- Do not attempt to operate any of the valves on the pipeline. Improper operation of the valves could worsen the situation and cause other accidents to happen.
