

Bison Pipeline, LLC entered commercial service on January 14, 2011. Bison is an interstate natural gas pipeline designed to transport gas from the Powder River Basin to the Midwest market. The pipeline provides producers in the Powder River Basin with additional natural gas pipeline capacity to access and meet increasing natural gas demand in the Midwest. Bison consists of approximately 302 miles of 30 inch diameter pipeline and related system facilities that extend northwestward from the Dead Horse Region near Gillette, Wyoming, through southeastern Montana and southwestern North Dakota, where it connects with Northern Border Pipeline Company at its Glen Ullin Compressor station. Bison is operated by TransCanada Corporation. TransCanada operates one of the most sophisticated pipeline systems in the world. Our network of more than 56,000 miles of natural gas pipelines connect virtually every major natural gas supply basin and market, transporting 25% of the natural gas consumed in North America.

TransCanada Bison Pipeline System Pipeline Markers and Signs

Right of Way Signs

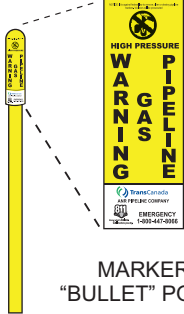

A. Pipeline Markers are placed along the Right of Way, at Road Crossings, at Railroad Crossings and where each pipeline enters or leaves a fenced facility. Pipeline markers similar to these shown below are located above and near the pipe centerline. They display the name of the operator, product and emergency contact number.

- Marker signs may be attached to fence posts or to facility fencing.
- Marker "bullet" post may be placed over metal fence post or stand alone.
- Marker "slat" post may be used in lieu of either above marker type.

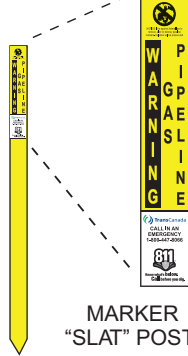

MARKER SIGNS

MARKER "BULLET" POST

MARKER "SLAT" POST

Facility Markers

B. Danger signs are located along the perimeter of gas facilities, and at roadway entrance gates. These signs are to warn visitors and inform Emergency Responders of high pressure natural gas precautions.
