Rapid City, SD 57701

Black Hills Corporation operates six natural gas fired combustion turbine power plants. They provide generation to serve our Black Hills Colorado Electric Utility customers.

In order to provide the necessary generation from these power plants, gas pipelines are used to transport natural gas fuel used to operate the turbines.

Natural Gas Pipelines

Black Hills Corporation operates 6 miles of natural gas pipeline in Colorado – Pueblo County. Natural gas pipelines are the transportation roadways for supplying natural gas to Black Hills Corporations combustions (gas) turbines. Natural gas pipelines are the nation's safest method of delivering clean-burning natural gas. And while our safety record is exceptional, it is important for anyone who lives and works near natural gas pipelines to know basic safety information.
