Southern Star, headquartered in Owensboro, Kentucky, is a natural gas transmission system spanning over 6,000 miles in the Midwest and Mid-continent regions of the United States. Southern Star's 460 employees and its pipeline system and facilities are located throughout Kansas, Oklahoma, Missouri, Wyoming, Colorado, Texas, Nebraska, and Kentucky. It serves major markets such as St. Louis, Wichita, and Kansas City. Southern Star is a locally managed private company owned by GE's Energy Financial Services business and Caisse de depot et placement due Quebec.

Southern Star has provided over 100 years of continuous, quality service since its formation in 1904. Highly sought after due to its consistently strong performance, desirable location in America's heartland, and quality of service, Southern Star has enjoyed various owners and undergone several name changes over the last century; however, one thing has remained constant: its reputation for continuous, safe, quality service. That is our mission and our goal for our customers, employees, and the communities in which we operate.

We're also committed to our communities. You'll see Southern Star employees serving as mentors to students, helping reconstruct towns after natural disasters, volunteering with local charitable organizations, and coaching children's teams. We're your neighbors, and we're your friends. Southern Star supports its employees' volunteerism and makes every effort to provide time for employees to make a difference where they work and live.

COMMITMENT TO SAFETY, HEALTH, & ENVIRONMENT

Southern Star is proud of its long history of safe and continuous service. It believes that its safety record is thanks in large part to the partnerships it has formed with the public throughout its century of operations. This commitment to communication and teamwork with Southern Star's fellow citizens along its pipeline system will carry it into its next century of safe, secure service. Southern Star considers its employees, key stakeholders, and the citizens of the communities in which it operates as partners in the endeavor. Southern Star realizes that each of these partners play a critical and unique role in helping it operate its system safely, so it utilizes varied and appropriate communication methods to better ensure that the public is aware of the role it plays in creating a safer natural gas transmission and storage network. Southern Star has historically conducted public awareness programs with the affected public, public safety officials, and excavators. Southern Star's Public Awareness Program's goal is to document the development, implementation, and evaluation of Southern Star's public awareness program in a continuing effort to increase its effectiveness.
