Spire Storage Wyoming
 35 billion cubic feet of natural gas

**Uinta County Wyoming
Evanston, WY**

Spire has more than 160 years of experience delivering natural gas services, and we have owned and operated natural gas storage facilities for more than 65 years. Natural gas storage supports grid security, safety and reliability by providing critical backup supply to manage variable energy demand.

Located in the southwestern corner of Wyoming, our natural gas storage facilities are connected to five interstate pipelines including the Kern River, Ruby, Questar, Overthrust and Northwest pipelines. We are also strategically located near the liquid Opal Hub and have access to the Rockies Express to serve customers across the country. We help customers move gas out of the Rocky Mountains area to multiple regions and customer bases.

COMMITMENT TO SAFETY, HEALTH, & ENVIRONMENT

Caring for the environment is a shared responsibility that we fully embrace as an energy company. We're focused on operating our business in a way that protects our planet today and for generations to come. Our pipeline upgrade program, a cornerstone of our environmental sustainability efforts, continues to gain momentum, reducing leaks and methane emissions across our system.
