## CHEYENNE CONNECTOR

The Cheyenne Connector pipeline is a 70-mile interstate natural gas pipeline placed in service in June 2020, providing much needed incremental takeaway capacity from the Denver-Julesburg Basin to the Rockies Express Pipeline (REX) Cheyenne Hub just south of the Colorado/Wyoming border. Cheyenne Connector, coupled with the REX Cheyenne Hub, provides Colorado producers connectivity to bring their natural gas into the REX pipeline at Cheyenne Hub and from there to markets across the country. Tallgrass is 50 percent owner and operator of Cheyenne Connector; DCP Midstream owns the other 50 percent. With a design capacity of 1000 MMcf/d, Cheyenne Connector unlocks the D-J for years to come.

## PONY EXPRESS PIPELINE

The approximately 830-mile Pony Express (PXP) crude oil pipeline originates in Guernsey, Wyo., and runs through Colorado, Nebraska and Kansas, connecting with three refineries before terminating in Cushing, Okla. PXP sources oil from the Bakken, Denver Julesburg and Powder River plays, delivering five distinct common streams for our customers – Bakken Light Sweet, Mixed Sweet, Niobrara, Pony Express Light and Central Kansas Uplift – to the Cushing oil hub for distribution to markets across the country. Placed in service in 2014, Pony Express has a transportation capacity of more than 400,000 barrels a day. The pipeline is constructed of 22- and 24-inch steel pipe and has an average MAOP of 900.

## ROCKIES EXPRESS PIPELINE

Rockies Express Pipeline (REX) is one of the United States' largest pipelines and is transforming into the nation's northernmost bi-directional natural gas header system. The pipeline is jointly owned by Tallgrass Energy (75 percent) and Phillips 66 (25 percent). REX became fully operational in 2009 and stretches about 1,700 miles from northwestern Colorado and Wyoming to eastern Ohio. Built with 42- and 36-inch diameter steel pipe, REX taps major supply basins in the Rocky Mountain and Appalachian regions and serves energy markets across a vast segment of North America. REX's Zone 3, which spans from eastern Illinois to eastern Ohio, is bi-directional and can flow up to 4.4 billion cubic feet per day of natural gas. West-to-east long-haul capacity on REX is 1.8 billion cubic feet per day. REX has an MAOP of 1,480.

## TALLGRASS INTERSTATE GAS TRANSMISSION

Tallgrass Interstate Gas Transmission (TIGT) owns and operates approximately 4,650 miles of natural gas transportation pipelines in Colorado, Wyoming, Kansas, Nebraska, and Missouri. To help balance seasonal loads, TIGT also owns the Huntsman natural gas storage facility, located in Cheyenne County, Neb., which has approximately 16 billion cubic feet of storage capacity. The pipeline is constructed of between 2- and 24-inch steel pipe and has an average MAOP of 750. TIGT serves, through local distribution companies (LDCs), largely rural residential, commercial, and agricultural customers in Colorado, Kansas, Nebraska, Wyoming, and Missouri. TIGT also delivers natural gas for a significant number of commercial and industrial loads, including ethanol and power plants.

## TRAILBLAZER

Built to move prolific gas production from the Rockies supply region to the mid-continent, Trailblazer is an approximately 450-mile-long pipeline that extends from Cheyenne, Wyo., to Beatrice, Neb. At Beatrice, Trailblazer interconnects with large interstate natural gas pipelines that transport the gas on to major consumer markets in the country, such as Chicago, the upper Midwest, and the Northeast. Trailblazer is a crucial conduit between the Rockies and the Midcontinent and is consistently one of the lowest-priced routes out of the Rockies. It also directly serves a number of

**TALLGRASS MIDSTREAM**

Tallgrass Midstream (TMID) assets are strategically located in Wyoming’s Powder River and Wind River basins. Assets include natural gas gathering facilities and natural gas processing and treating plants. TMID creates value for customers by processing and treating natural gas for flow into interstate pipelines and on to a diverse customer base that includes residential, commercial, and industrial users. This allows producers to deliver their product in a market-ready form and to recover natural gas liquids (NGLs) – propane, butane, and natural gasoline.

With a capacity of 50 million cubic feet per day, TMID’s gas treating plant near Riverton, Wyo., treats the gas for processing at our Casper and Douglas, Wyo., plants. With a combined processing capacity of 190 million cubic feet per day, the Casper and Douglas processing plants are the only plants that provide straddle processing of natural gas flowing on the Tallgrass Interstate Gas Transmission (TIGT) system.

**COMMITMENT TO SAFETY, HEALTH AND ENVIRONMENT**

In Colorado, Tallgrass Energy operates Cheyenne Connector, Pony Express Pipeline, Rockies Express Pipeline, Tallgrass Interstate Gas Transmission, Trailblazer an Tallgrass Midstream. Tallgrass takes seriously its responsibility to ensure the health and safety of our employees, the general public and the environment. We comply with all federal, state and local laws and regulations, and we

meet or exceed industry standards and best practices. Highly trained and experienced personnel monitor our pipelines 24 hours a day, 7 days a week using sophisticated Supervisory Control and Data Acquisition (SCADA) systems, so we have real-time information regarding the safety and integrity of our pipeline. We patrol our pipelines by foot, vehicle, and aircraft to ensure safety and identify potential concerns such as encroachments.

We have emergency shut-down systems that can isolate anomalies anywhere in our system quickly and safely. As part of our ongoing education efforts, we work regularly with first responders – using tools such as tabletop exercises and hands-on mock drills – to ensure they are familiar with our assets and know what to do in the unlikely event of an emergency. In addition, Tallgrass is an active member of Common Ground Alliance, working together to educate stakeholders on pipeline safety and to promote safe excavation.

For more information about our commitment to safety and our public awareness, damage prevention and emergency preparedness activities and resources, please visit our web site at [www.tallgrassenergy.com](http://www.tallgrassenergy.com) or contact Tallgrass directly.
