ABOUT WBI ENERGY TRANSMISSION

WBI Energy Transmission transports natural gas. As a safety precaution, odorant is added to our transmission lines to make natural gas detectable to the sense of smell. Our steel coated pipelines vary in size from 2 inches to 16 inches in diameter. The maximum operating pressures range from as little as 100 lbs. to 1,468 lbs. The gas travels at an average speed of about 15 miles an hour in the lines. Compressor stations are located along the line to maintain this rate. A computerized gas control center monitors the system 24 hours a day and can be reached at 1-888-859-7291 .

COMMITMENT TO SAFETY, HEALTH & ENVIRONMENT

Unfortunately, some emergencies do not exhibit warnings of imminent failure while others develop because the warnings were not recognized. We must therefore be prepared to respond effectively when an emergency develops. The key to effective emergency management and response preparedness is clear, concise communication and effective cooperation. When you call the 24-hour emergency phone number located on our marker

signs or as listed in this document, you will speak with someone at our gas control center. The control center is the heart of the pipeline operations, where information about the pipeline and operating equipment is constantly monitored. As an emergency responder, you can help control the incident by being prepared to communicate as much information as possible to the control center about the current incident situation. Every incident
