Contact Center: 1005 D Street
P.O. Box 1450
Rock Springs, WY 82901
1-800-323-5517

Dominion Energy Wyoming operates natural gas distribution and transmission facilities in Southwestern Wyoming.

HOW TO IDENTIFY A LEAK

The following signs may indicate a natural gas pipeline leak or failure:

- A hissing, roaring or blowing sound
- Dirt being blown into the air
- Water being blown into the air at a pond, river or creek
- Continuous bubbling in wet, flooded areas
- Fire at or near exposed piping
- Flames apparently emanating from the ground
- Dead or brown vegetation in an otherwise moist or green field
- A "rotten egg" odor

Note: In its natural state, natural gas is odorless, as well as colorless and nontoxic. Local utilities add an odorant called mercaptan to its supplies to make leaks easy to detect by smell. However, odorants are usually added to pipelines only in populated areas, so leaks, especially in open country, cannot always be detected by smell.

WHAT TO DO IF A LEAK OCCURS

Follow these steps if you discover natural gas escaping from a broken or leaking line:

- Turn off all machinery and vehicles and prevent other sources of ignition such as open flames and the operation of electrical switches or cellular phones
- Evacuate everyone from the endangered area and keep vehicles and bystanders away
- Do not attempt to make any repairs or operate any pipeline valves
- Do not attempt to extinguish any fire
- From a safe place, report a leak or other natural gas emergency by calling Dominion Energy at 1-800-300-2025.
- Call 911 or otherwise notify your local emergency-response agency such as fire department or law enforcement
